

Spreadsheet

Exercise 1

What is a spreadsheet?

Lets go here and see What it's all about.

<http://www.web-esl.com/spreadsheet/Spreadsheets.htm>

1. Enter the following information in columns A to E.
2. Center column headings, adjust column widths as necessary, and format values as shown below.

INTEREST COMPUTATION TABLE				
Loan		Interest	Time	Interest
No.	Principal	Rate	(Days)	Amount

1	4000	0.12	90	
2	2500	0.145	120	
3	10000	0.15	360	
4	4000	0.09	30	
5	3500	0.085	60	
6	8000	0.18	90	
7	5000	0.15	180	
8	12000	0.21	270	
9	7000	0.125	180	
10	7500	0.1	30	
11	700	0.099	60	
12	500	0.088	90	
13	1000	0.088	90	
14	3000	0.099	60	
15	5000	0.1	30	
16	7000	0.125	120	
17	9000	0.21	180	
18	12000	0.15	270	
19	15000	0.18	360	
20	13000	0.085	270	

		TOTAL >>>>>		
		AVERAGE >>>		

3. The formulas needed to compute:
 - Interest Amount (principal * interest rate * days) divided by 360
 - Total Interest (on bottom)
 - Average Interest (on bottom)
4. Enter the formulas in the spreadsheet.
5. Change the format of columns that are money to Currency with 2 decimal places.
6. Adjust column width as necessary.
7. Change the principal for loan 7 to 7,500 and the interest for loan 15 to .125
